# Chapter 1

## Hierarchical Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

CSIR< T > . . . . .	5
CSR< T > . . . . .	8
exception	
MultSizeMismatch . . . . .	11

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">CSIR&lt; T &gt;</a>	
<a href="#">CSIR</a> - Compressed Sparse (lower triangle) Row . . . . .	5
<a href="#">CSR&lt; T &gt;</a>	
<a href="#">CSR</a> - Compressed Sparse Row . . . . .	8
<a href="#">MultSizeMismatch</a>	
Exception that is thrown when trying to multiply the <a href="#">CSR</a> or <a href="#">CSIR</a> matrix on vector of the invalid size . . . . .	11

## Chapter 3

# Class Documentation

### 3.1 CSIR< T > Class Template Reference

**CSIR** - Compressed Sparse (lower triangle) Row.

```
#include <csir.h>
```

#### Public Member Functions

- **CSIR** (T \*\*mtx, T eval, int size)  
*Creates an instance of **CSIR** sparse matrix.*
- **~CSIR** ()  
*Deletes an instance of **CSR** sparse matrix.*
- **CSIR** (**CSIR** &other)  
*Copies the data of **CSIR** sparse matrix from other **CSIR** matrix.*
- **CSIR** & **operator=** (**CSIR** &other)  
*Assigns an instance of **CSIR** sparse matrix with other **CSIR** matrix.*
- T \* **adiag** () const  
*Gets **adiag** - an array of diagonal elements.*
- T \* **altr** () const  
*Gets **altr** - an array of nonempty elements of lower triangular matrix.*
- T \* **autr** () const  
*Gets **autr** - an array of nonempty elements of upper triangular matrix.*
- int \* **iptr** () const  
*Gets the **iptr** - an array of position in which the corresponding rows appear in **altr** for the first time.*
- int \* **jptr** () const  
*Gets column-indices of the corresponding **altr** elements.*
- int **size** () const  
*Gets size of matrix (number of rows)*
- int **size\_of\_altr** () const  
*Gets size of **altr** - number of nonempty elements in lower triangular matrix.*
- std::vector< T > **operator\*** (std::vector< T > &vec)  
*Multiplies **CSIR** matrix by vector.*

### 3.1.1 Detailed Description

```
template<typename T>
class CSIR< T >
```

**CSIR** - Compressed Sparse (lower triangle) Row.

Sparse matrix format for asymmetric matrices with symmetric portraits. A.k.a. Skyline format.

Matrix is stored in following vectors:

- `adiag` - diagonal elements
- `altr` - nonempty elements of lower triangular matrix
- `autr` - nonempty elements of upper triangular matrix
- `iptr` - i-th element holds the position in which the i-th row appears in `altr` for the first time
- `jptr` - column-indices of the corresponding `altr` elements

#### Template Parameters

<code>T</code>	- Type of data stored in matrix.
----------------	----------------------------------

### 3.1.2 Constructor & Destructor Documentation

3.1.2.1 `template<typename T> CSIR< T >::CSIR ( T** mtrx, T eval, int size )` `[inline]`

Creates an instance of **CSIR** sparse matrix.

Parses a given plain symmetricmatrix into a **CSIR** format. Note that all the diagonal elements are treated as nonempty.

#### Parameters

<code><i>mtrx</i></code>	Plain symmetric matrix
<code><i>eval</i></code>	Empty value
<code><i>size</i></code>	Size of matrix (number of rows)

3.1.2.2 `template<typename T> CSIR< T >::CSIR ( CSIR< T > &other )` `[inline]`

Copies the data of **CSIR** sparse matrix from other **CSIR** matrix.

#### Parameters

<code><i>other</i></code>	Reference to other <b>CSIR</b> matrix
---------------------------	---------------------------------------

### 3.1.3 Member Function Documentation

3.1.3.1 `template<typename T> T* CSIR< T >::adiag ( ) const` `[inline]`

Gets `adiag` - an array of diagonal elements.

**Returns**

adiag array

**3.1.3.2** `template<typename T> T* CSIR<T>::altr ( ) const` `[inline]`

Gets altr - an array of nonempty elements of lower triangular matrix.

**Returns**

altr array

**3.1.3.3** `template<typename T> T* CSIR<T>::autr ( ) const` `[inline]`

Gets autr - an array of nonempty elements of upper triangular matrix.

**Returns**

autr array

**3.1.3.4** `template<typename T> int* CSIR<T>::iptr ( ) const` `[inline]`

Gets the iptr - an array of position in which the corresponding rows appear in altr for the first time.

**Returns**

iptr array

**3.1.3.5** `template<typename T> int* CSIR<T>::jptr ( ) const` `[inline]`

Gets column-indices of the corresponding altr elements.

**Returns**

jptr array

**3.1.3.6** `template<typename T> std::vector<T> CSIR<T>::operator* ( std::vector<T> & vec )` `[inline]`

Multiplies [CSIR](#) matrix by vector.

Note that for large sparse matrices this multiplication will be extremely efficient.

**Parameters**

<code>vec</code>	Given vector
------------------	--------------

**Returns**

Result of multiplication

**3.1.3.7** `template<typename T> CSIR& CSIR<T>::operator= ( CSIR<T> & other ) [inline]`

Assignes an instance of [CSIR](#) sparse matrix with other [CSIR](#) matrix.

Copies all the data from other matrix

#### Parameters

<i>other</i>	Reference to other <a href="#">CSIR</a> matrix
--------------	--

**3.1.3.8** `template<typename T> int CSIR<T>::size ( ) const [inline]`

Gets size of matrix (number of rows)

#### Returns

Size of matrix

**3.1.3.9** `template<typename T> int CSIR<T>::size_of_altr ( ) const [inline]`

Gets size of altr - number of nonempty elements in lower triangular matrix.

#### Returns

Size of altr

The documentation for this class was generated from the following file:

- src/csir.h

## 3.2 CSR<T> Class Template Reference

[CSR](#) - Compressed Sparse Row.

```
#include <csr.h>
```

### Public Member Functions

- [CSR](#) (T \*\*mtx, T eval, int rows, int cols=0)  
*Creates an instance of [CSR](#) sparse matrix.*
- [~CSR](#) ()  
*Deletes an instance of [CSR](#) sparse matrix.*
- [CSR](#) ([CSR](#) &other)  
*Copies the data of [CSR](#) sparse matrix from other [CSR](#) matrix.*
- [CSR](#) & operator= ([CSR](#) &other)  
*Assignes an instance of [CSR](#) sparse matrix with other [CSR](#) matrix.*
- T \* [aelem](#) () const  
*Gets aelem - an array of nonempty elements of matrix.*
- int \* [iptr](#) () const  
*Gets the iptr - an array of position in which the corresponding rows appear in aelem for the first time.*
- int \* [jptr](#) () const  
*Gets column-indices of the corresponding aelem elements.*

- int [rows](#) () const  
*Gets the number of rows in matrix.*
- int [cols](#) () const  
*Gets the number of columns in matrix.*
- int [size\\_of\\_aelem](#) () const  
*Gets size of aelem - number of nonempty elements in matrix.*
- std::vector< T > [operator\\*](#) (std::vector< T > &vec)  
*Multiplies [CSR](#) matrix by vector.*

### 3.2.1 Detailed Description

template<typename T>  
class CSR< T >

[CSR](#) - Compressed Sparse Row.

Sparse matrix format for asymmetric matrices with asymmetric portraits.

Matrix is stored in following vectors:

- aelem - nonempty elements of matrix
- iptr - i-th element holds the position in which the i-th row appears in aelem for the first time
- jptr - column-indices of the corresponding aelem elements

#### Template Parameters

<i>T</i>	Type of data stored in matrix.
----------	--------------------------------

### 3.2.2 Constructor & Destructor Documentation

3.2.2.1 template<typename T > CSR< T >::CSR ( T\*\* *mtrx*, T *eval*, int *rows*, int *cols* = 0 ) [inline]

Creates an instance of [CSR](#) sparse matrix.

Parses a given plain matrix into a [CSR](#) format

#### Parameters

<i>mtrx</i>	Plain matrix
<i>eval</i>	Empty value
<i>rows</i>	Number of rows in matrix
<i>cols</i>	Number of columns in matrix

3.2.2.2 template<typename T > CSR< T >::CSR ( CSR< T > &*other* ) [inline]

Copies the data of [CSR](#) sparse matrix from other [CSR](#) matrix.

#### Parameters

<i>other</i>	Reference to other <a href="#">CSR</a> matrix
--------------	---

### 3.2.3 Member Function Documentation

3.2.3.1 `template<typename T> T* CSR<T>::aelem ( ) const` `[inline]`

Gets aelem - an array of nonempty elements of matrix.

Returns

aelem array

3.2.3.2 `template<typename T> int CSR<T>::cols ( ) const` `[inline]`

Gets the number of columns in matrix.

Returns

Number of columns

3.2.3.3 `template<typename T> int* CSR<T>::iptr ( ) const` `[inline]`

Gets the iptr - an array of position in which the corresponding rows appear in aelem for the first time.

Returns

iptr array

3.2.3.4 `template<typename T> int* CSR<T>::jptr ( ) const` `[inline]`

Gets column-indices of the corresponding aelem elements.

Returns

jptr array

3.2.3.5 `template<typename T> std::vector<T> CSR<T>::operator* ( std::vector<T> & vec )` `[inline]`

Multiplies CSR matrix by vector.

Note that for large sparse matrices this multiplication will be extremely efficient.

Parameters

<code>vec</code>	Given vector
------------------	--------------

Returns

Result of multiplication

3.2.3.6 `template<typename T> CSR& CSR<T>::operator= ( CSR<T> & other )` `[inline]`

Assignes an instance of CSR sparse matrix with other CSR matrix.

Copies all the data from other matrix

## Parameters

<i>other</i>	Reference to other <a href="#">CSR</a> matrix
--------------	---

**3.2.3.7** `template<typename T> int CSR<T>::rows ( ) const` `[inline]`

Gets the number of rows in matrix.

## Returns

Number of rows

**3.2.3.8** `template<typename T> int CSR<T>::size_of_aelem ( ) const` `[inline]`

Gets size of aelem - number of nonempty elements in matrix.

## Returns

Size of aelem

The documentation for this class was generated from the following file:

- `src/csr.h`

### 3.3 MultSizeMismatch Class Reference

Exception that is thrown when trying to multiply the [CSR](#) or [CSIR](#) matrix on vector of the invalid size.

```
#include <exception.h>
```

Inheritance diagram for MultSizeMismatch:

#### Public Member Functions

- `const char * what () const throw ()`

#### 3.3.1 Detailed Description

Exception that is thrown when trying to multiply the [CSR](#) or [CSIR](#) matrix on vector of the invalid size.

The documentation for this class was generated from the following file:

- `src/exception.h`
